UI/UX REVIEW

EchoGPT — Chrome Extension

Software QA Internship Assignment

Tester: Tanjila Akter Khanam

Test Date: 27.09.2026

Environment: Windows 11 (64-Bit), Google Chrome (Version 150.0.7871.187)

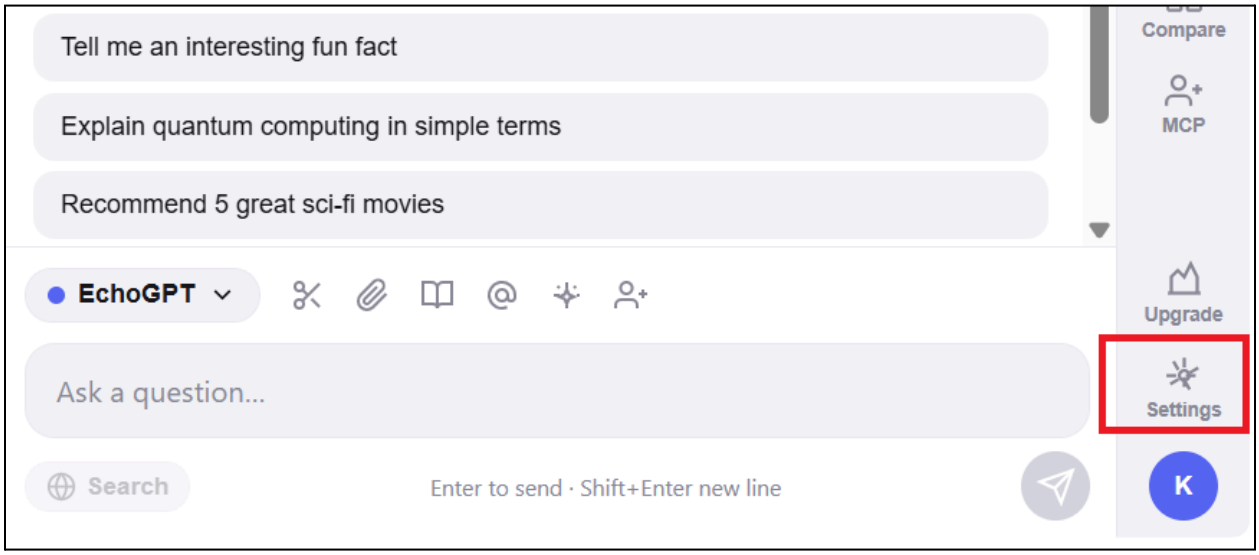

Total Suggestions: 10

Suggestion 1

Settings Icon (right sidebar)

Current Issue	Clicking the Settings icon directly shows a Logout popup, which is confusing and does not match user expectation.
Suggested Improvement	Settings icon should open the actual Settings page; Logout should be a separate, clearly labeled button/icon.

Suggestion 2

Screenshot Capture (scissor icon)

Current Issue	The icon used for the Screenshot Capture feature looks like a pair of scissors (✂️), which conventionally represents "Cut/Trim" rather than "Capture Screenshot." This makes the icon's actual function unclear to users. Additionally, when clicked, it throws a raw technical error ("activeTab not in effect") with no user-friendly guidance.
Suggested Improvement	Replace the scissor icon with a more intuitive one (e.g., a camera 📷 or crop-frame icon) that better represents "Screenshot Capture." Also show a clear, user-friendly message (e.g., "Please click the extension icon in your toolbar first, then try again") instead of the raw technical error.

Suggestion 3

Free-labeled model (LongCat 2.0)

Current Issue	"Free" badge is shown even though using the model requires payment, which is misleading.
Suggested Improvement	Update badges in real time based on actual availability, or remove the "Free" label if the model is now paid.

Suggestion 4

Chat History List

Current Issue	The delete icon next to each chat history item is not visible by default; it only appears when hovering over the item, making it hard for users to discover this option at a glance.
Suggested Improvement	Make the delete icon visible (even faintly) at all times, or use a persistent "..." (more options) menu icon that clearly indicates additional actions like delete/rename are available, without requiring hover.

Supporting Screenshot:

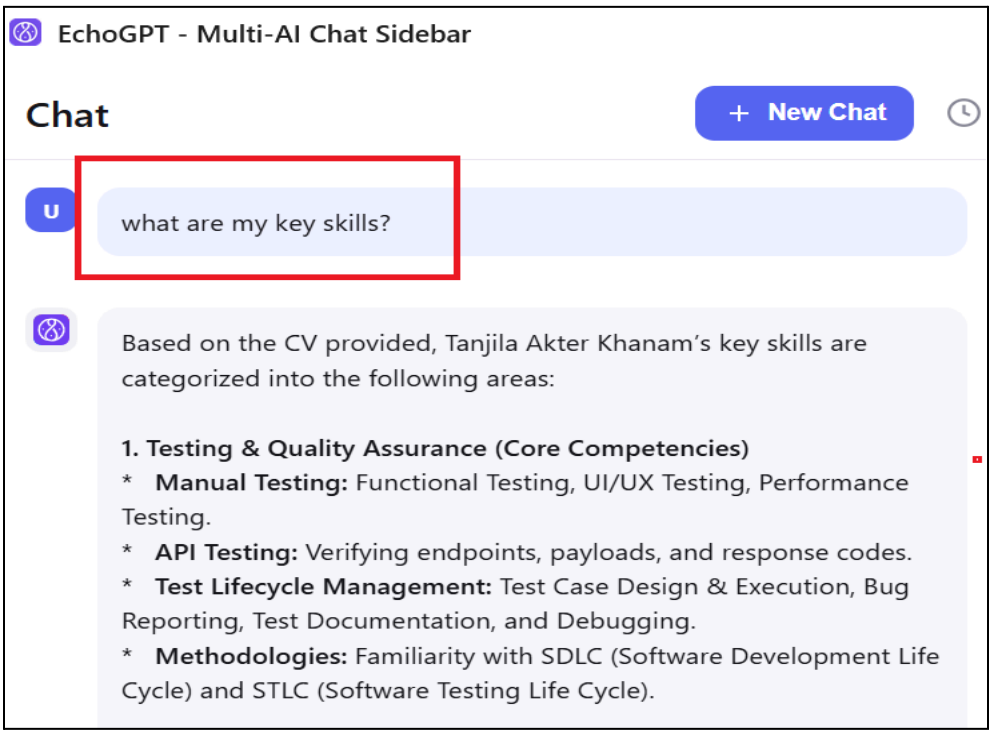

Suggestion 5

PDF Attachment

Current Issue	Sent PDF files show no visual representation (file name/icon) in the chat.
Suggested Improvement	Show the file name and an icon/thumbnail preview in the chat bubble so the user can confirm what was sent.

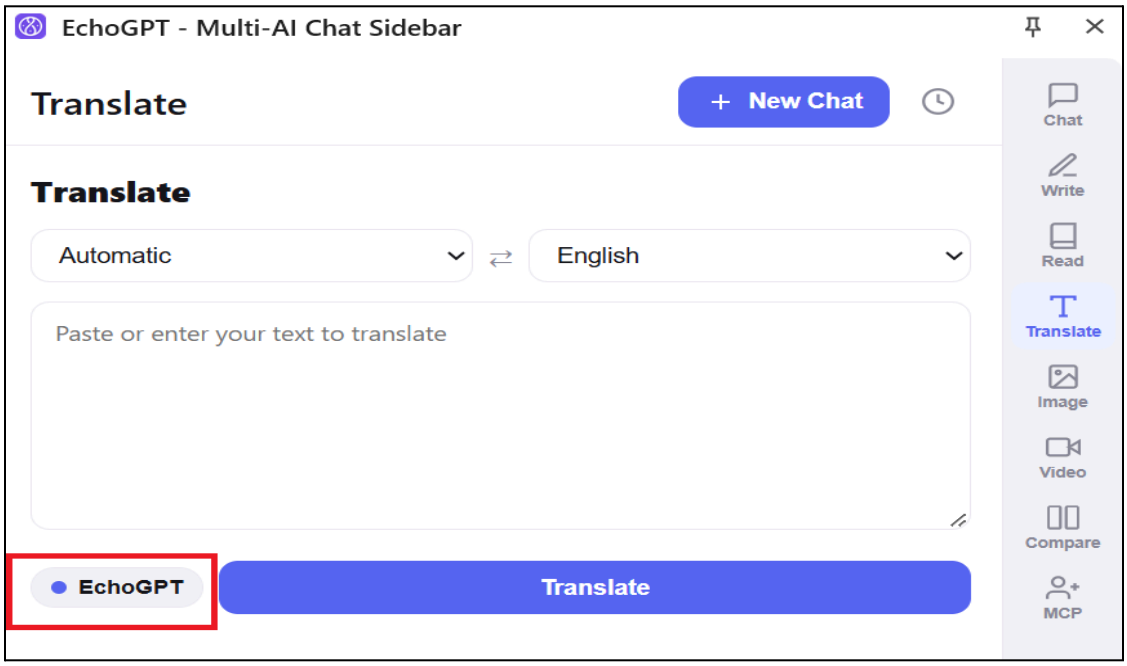

Supporting Screenshot:

Suggestion 6

Current Issue	Clicking on "EchoGPT" (the model name) in the Translate section directly shows a long list of available models, without any dropdown/chevron icon indicating that it's a clickable selector.
Suggested Improvement	Add a dropdown arrow/chevron icon (▼) next to "EchoGPT" to visually indicate that it's a clickable dropdown menu, making it clearer to users that more model options are available.

Suggestion 7

Create Account -- Email Step

Current Issue	An unrelated error ("First name is required") appears during email verification, even though there is no First Name field present on this screen for the user to fill in.
Suggested Improvement	Error messages should be field-specific and contextually accurate. If a First Name field is required as part of the account creation process, it should be added visibly on the same screen so users can fill it in before submitting, rather than showing an error for a field that doesn't exist on the page.

Supporting Screenshot:

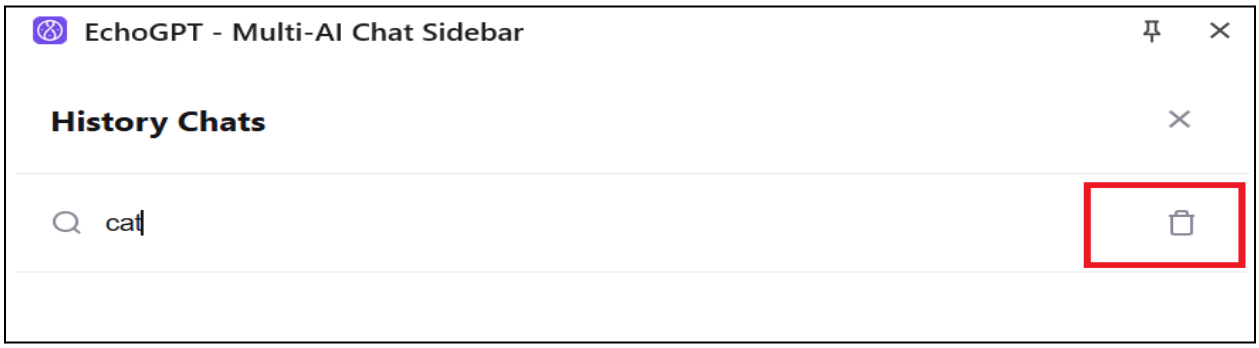

Suggestion 8

Search Box (Delete Icon)

Current Issue	The search box uses a delete/backspace-style icon instead of a clear "X" (cross) icon, making it less intuitive for users to quickly clear the entire search input.
Suggested Improvement	Replace the delete icon with a standard "X" (cross) icon next to the search box, allowing users to clear the entire search text in one click, which is a more common and intuitive UX pattern.

Suggestion 9

Video Section (Sidebar)

Current Issue	The "Video" option in the sidebar does not indicate that it's a paid feature. Users only discover this after entering a prompt and attempting to generate a video, at which point a payment-required error appears.
Suggested Improvement	Add a "Paid" or "Pro" label/badge next to the "Video" icon in the sidebar itself, so users are informed upfront before attempting to use the feature.

Suggestion 10

Image Section (Sidebar)

Current Issue	The "Image" option in the sidebar does not indicate that it's a paid feature. Users only discover this after entering a prompt and attempting to generate an image, at which point a payment-required error appears.
Suggested Improvement	Add a "Paid" or "Pro" label/badge next to the "Image" icon in the sidebar itself, so users are informed upfront before attempting to use the feature.
